

(a)

population returns to the logical subspace at t_1

$$U_{\text{log}}(t_1) = \text{diag}(e^{-iJ_{\text{int}}t_1/4}, -e^{i(J_{\text{int}}t_1/4 + \Delta t_1/2)}, -e^{i(J_{\text{int}}t_1/4 - \Delta t_1/2)}, e^{-iJ_{\text{int}}t_1/4})$$

(b)**(c)**

— Quasistatic Leakage — $1/f$ Infidelity
